

The 2 user tasks are:
A collector can view his or her history of a gps tracked run or ride and upload an associated video clip.
A collector can track and see the status of particular issues. They can see other reports associated with the same issue.
The 2 system tasks are:
A task that calls the computer vision component and extracts the video frames, time position, suspected type of activity, and set of geometric boundaries and overlays provided by the computer vision component.
